

CSCI-631 Foundations of Computer Vision – Annotation Pilot

Due

2020/03/06 11:59 pm

Submit as earlier as you can. The Grader will give you feedback ASAP.

Overview:

This task is set just for the following purposes:

1. Make sure everyone knows how to use the annotation tool;
2. Make sure everyone understands the annotation task properly;
3. (Hope not) Test the tool, in case there are fatal bugs in it.

You'll get 1 point for this task, no matter what the quality of the annotation is. But you need to check the feedback in time to make sure yours are with high quality.

If the annotations of less than 3 teams do not meet the requirements, those who got it wrong need meet Haiting in person to get more help (send to her email to schedule). Otherwise you'll lose your bonus point, and it will also influence the grade for Project.

If the annotations of 4+ teams do not meet the requirements, there will be a mandatory group meeting those who got it wrong. You'll lose your bonus point, and it will also influence the grade for Project if you cannot make it.

Task:

Each of the two/three members in one group to annotate two/three clips separately, and the talk to each other to reach a consensus.

Deliverable:

The annotation .txt file named as the [frame_folder_name].txt
